

For 23 years TURNSTILES.us has been supplying our exceptional quality Modular Turnstile Buildings to Businesses and Government for a number of applications.

Due to increased customer demand, TURNSTILES.us now manufactures our Modular Turnstile Buildings from Pre-Engineered Modular Fiberglass Sections which allows us to make our buildings in 2ft increments! No longer are we constrained by ISO Container Sizes AND our Flooring does not contain the Toxins (Pesticides and Herbicides) that an ISO Container has!

DURABILITY: Fiberglass has one of the highest strength to weight ratios available. It is pound for pound stronger than metal. During the manufacturing of the Fiberglass Component the strength is built right into the part, allowing a simple, highly resistant to environmental factors including extreme cold and heat, it is water and chemical resistant, it will not rust or corrode. The non-corrosive properties of fiberglass give it a much longer life expectancy than metal structures.
